

I am Pallavi Bothra. I have PhD and Postdocs in Computational Material Science. My research area includes studying and analysing new materials for applications in fuel cells, batteries and semiconductors using various statistical and quantum mechanical methods. I am about to finish Springboard's bootcamp for Data Science Career Track. Right now, I am looking to transition into the field of data science. During this switch, I have realised that given my past experiences in computational methods and data analysis skills in the renewable energy sector, tech and energy related industries will be the right space for me to start with.
